

STRETCHER CAGE

Our Stretcher Cage is designed to transport injured or immobile personnel from a building or excavation. It offers a safe method of lifting a stretcher without having to tilt it in any way, providing space for the stretcher plus an attendant.

The cage is equipped with half height metal sides with an entrance door. A four legged chain sling comes with the cage and is attached to the four main lifting points.

80000170

Key Benefits:

- The safest method of lifting a stretcher from height
- Additional space for one person to accompany the injured person
- The half height metal sides provide safety for personnel in the cage

Product Specification:

Capacity	SWL (kg)	Width (mm)	Length (mm)	Height (mm)	Weight (kg)
2 person	250	880	2590	2125	450

Safety Tip: The cage is for transporting a single stretcher with casualty and a maximum of one assistant, providing there is enough room for all to be safely transported.
