

INTRUDER ALERT

Maintaining your crane security is paramount to ensuring public safety and smooth operation of the project at hand. These intruder breaches can have many negative consequences including damaged equipment, lost productivity and even risk of injury or death.

WOLFF Onsite have developed a digital radio Anti-Climb Detector to help combat this. If an intruder climbs the crane unauthorised, either internally or externally, the system activates an audible alarm to the radio system on the ground.

80000403

Instant alert of an intruder climbing the crane

Back up battery system offering two hours back up

Remote activation/deactivation

Additional site security

Alerts to portable/fixed radio units with displays to identify the crane that's been breached

Product Features:

- Our system is based on the highly durable Motorola system
- Two high power IP57 infrared beacons
- Automatically activating an audible alarm to the radio system on the ground
- 100v or 240v power options
